

# 5 Minute BB Band Trades - Correlation

Top and bottom BB band trades: This is best executed when the top or bottom 5 minute BB band correlates closely with the 15 min, 30 min, and/or 1 hr orange road (moving average). Example Below: You are at the top of the 5 minute BB and candle has a small wick. You are also at the 15 min OR and the 30. Not shown - Very close to 1 hour orange road.

## 5 minute BB Entry with correlation

Ok. Let's check the results of this high probability trade.

BTT! BANG THE TABLE! 140 PIP MOVE!

Let's break this trade down in steps.

1. Look for correlation with 5 min BB, 15 minute OR, 30 minute OR, and close to 1 hour.
2. Look for long-term arrows against you. Needs to have both 1 & 4 hour to beat this. In this example it had a previous yellow/red on 15, a yellow on 30, and not shown...but a super pink/red on 1 hour. It needed a minimum of a yellow/red on 1 hour or a 4 hour super to push higher.

3. Enter your trade at the top of the 5 min BB with 1 or really any of the following:  
Momentum bars change, 1 min/hash chart yellow arrow down, 5 min yellow or green.
4. This is a very high probability trade! It's good for at least 10 pips but much more if the overall trend is down and/or volume is high in the market.

Now...This happens every single day! It might not happen this exact way, but very close to it opposite of the example above. Look for the same setup but just in the opposite direction.

This should make your trading an enjoyable and relaxing experience. Just look for this setup, be patient and take your pips. Keep in mind...

20 PIPS A DAY WILL MAKE YOU A MILLIONAIRE IN 6 MONTHS!

## Checklist For 5 Min BB Absolute Safest Trade

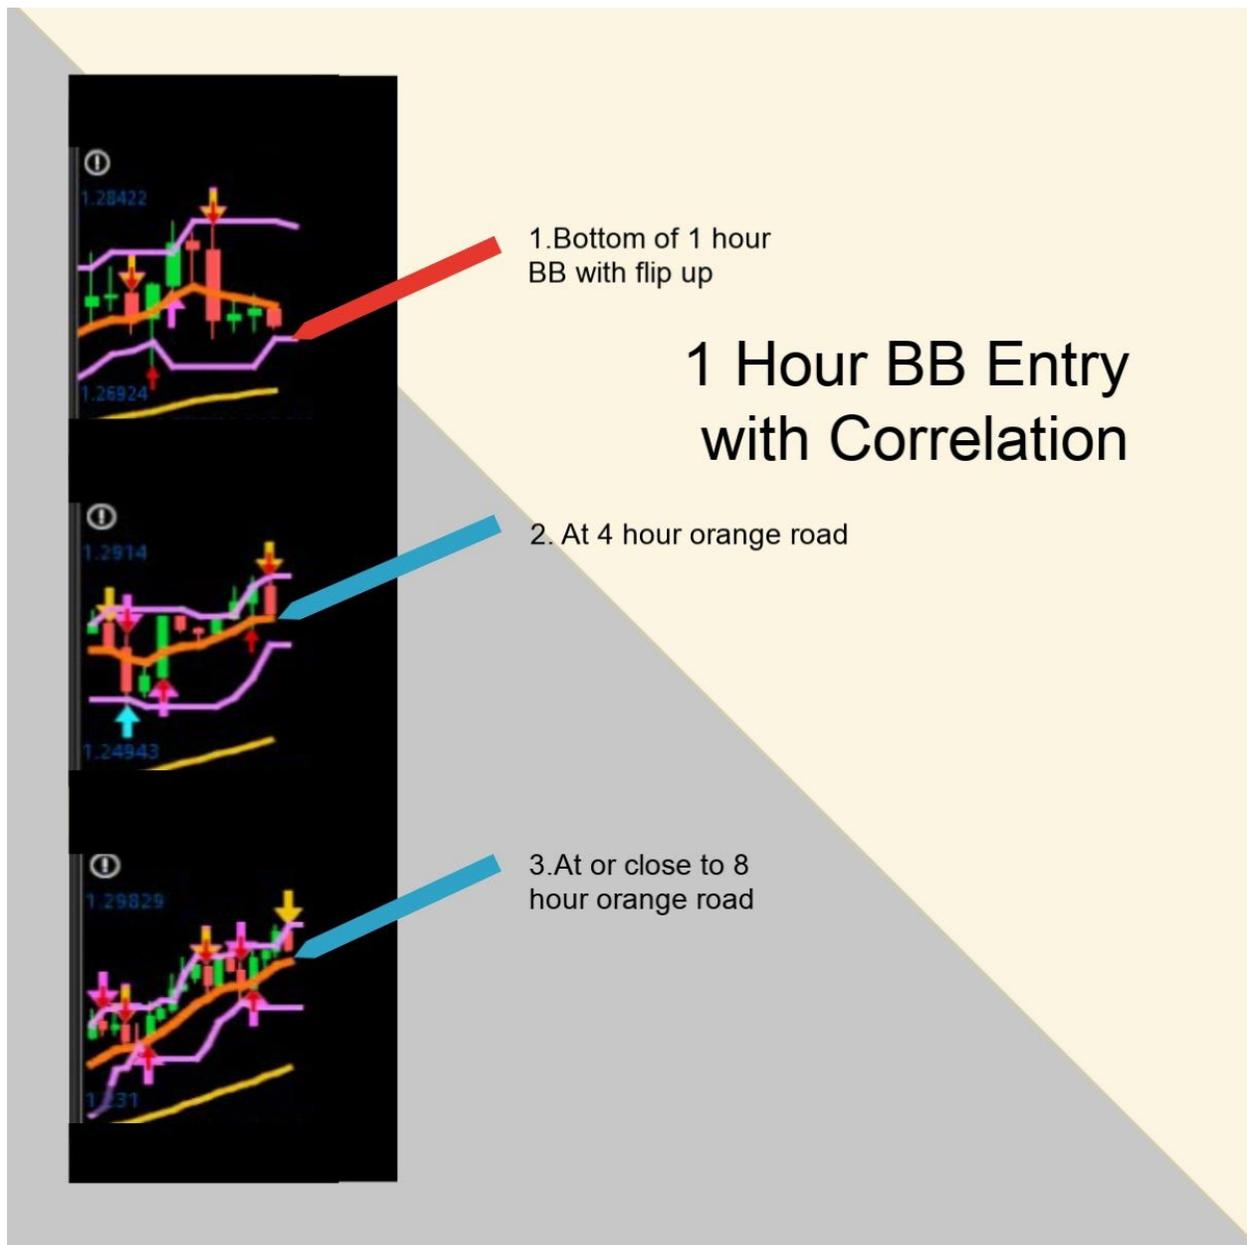

- Not Many Yellow Arrows on 5 min
- Direction - 5,15,30, & 1
- No Yellow Red on 1 Hour
- No Super on 1 and 4 both
- No 4 Hour Blue

As seen in the PDF this method is obviously used when trading the immediate trend. Above are a few more things that will really make this the safest trade possible. It's not 100% but if you check that list it's probably 99%. Of course that situation may only come 1x day, so take advantage of it and get your PIPS!

Also, as stated in the PDF, this setup can happen on HA BB, 5 min OR, and/or 15 OR. The PDF shows from 5 min BB, 15 OR, & 30 OR. Chances are good if there is a super on the 1 hour it will be an exact setup as shown on the PDF. If there is no super on 1 hour it will most likely occur at the HA BB, 5 OR, and/or 15 OR.

# 1 Hour BB Band Trades - Correlation

Here is a visual confirmation of the 5 min BB entry correlation happening on other timeframes. In this example it is taking place on the 1 hour BB band, the 4 hour orange road, and the 8 hour orange road. In this situation, there is a yellow/red against it on the 4 hour, a yellow on the 8 and a daily blue (not shown). There are a couple differences in this trade compared to the 5 min correlation trade in the previous PDF. I will explain when you see the results.

Ok. Let's check the results of this 1 hour BB entry high probability trade.

**BTT! BANG THE TABLE! 35 PIP MOVE! WHAT...WHY ONLY 35???**

In this example and what is not showing is the 5, 15, 30 minute charts are all down, plus low volume at the time. There is a battle between shorter term and overall trend. That is why you see all those confused candles between the 1 hour OR and the 1 hour BB, bouncing back and forth until the flip up. So, it's a good practice in this situation to take your pips and exit at the top of the 5 min BB or the start of the wick shown on the 1 hour chart.

Let's break this trade down in steps.

1. Look for correlation with 1 hour BB, 4 hour OR, 8 hour OR.
2. Look for long-term arrows against you. Needs to have an 8 hour yellow/red or super on daily to beat this. In this example it had a previous yellow/red on 4 hour, a yellow on 8, and a blue on daily. It needed a minimum of a yellow/red on 8 hour or a daily super to push lower.
3. Enter your trade at the bottom of the 1 hour BB with 1 or really any of the following: Momentum bars change, 1 min/hash chart yellow arrow up, 5 min yellow or green, and/or 15 & 30 blues. In this situation I would guarantee a win if 15 & 30 blues were showing.
4. This is another very high probability trade! It's good for at least 10 pips but much more if all roads are up and/or volume is high in the market. There were at least 10 pips between the 1 hour BB and the 1 hour OR. Take your money and run if you feel uncomfortable about staying in the trade. Or half your lot size, keep 1 running and take your 10 pips.

Now...I just wanted to show you an example on longer timeframes. Again, this happens every single day! It might not happen this exact way, but very close to it opposite of the example above. Look for the same setup but just in the opposite direction.

This should make your trading an enjoyable and relaxing experience. Just look for this setup, be patient and take your pips. Keep in mind...
