

Teniecia's **GOLDEN** Trading Flow Chart

My Lingo KEY:

HTF = Higher Timeframe (1H/4H/8H/Daily)
 LTF = Lower Timeframe (HA/5M/15M/30M)
 w/ = with
 Flow = what's happening on (15M/30M)
 Trend = what's happening overall HTF or HTF<F combined

@ EVERY HA 5M (OR) 1H+ Wall (OL/BB) ASK YOURSELF:

Is This Entry/Bounce Trending?

Unsure? Choose another Pair and start again

Is It With The Current Flow? (See 15M/30M)

No but it goes with current flow (15M/30M)

***Golden Tip: If these never show up wait to go back with the flow from an appropriate BB Band and start again.**

***Golden Tip: Any supporting signals (HA+) or correlations that appear w/your entry at this point is a bonus!**

Take entry from 5M or HA BB w/momentum as long as no stronger signals come against you.

Take w/ HTF Blues, and as many of the following: Supporting signals (HA/5/15/30+), Flips, 2nd moves, and Momentum

Going AGAINST HTF Flow/Trend or any Active HTF Signals? (1H/4H/8H/Daily)

Yes

No

Be sure to use as many of the following: 2nd move, (let price retest a previous low OR let price go above/below the 5M OL and enter on a retrace with a correlating HA BB flip) momentum, and supporting signals. The stronger the better!

***Golden Tip: Entries AGAINST the HTF Trend work best when price has busted outside of all HTF Bands w/supporting HTF BLUES & Signals**

Continue to take with momentum as long as no blues and/or active signals come AGAINST you.

***Golden Tip: As a bonus always check to see if anything correlates w/your trade decision for added confirmation & confidence.**

REMEMBER:
 When unsure stick w/trending signs or simply choose a pair that you can clearly read. Always enter with as many correlations as possible. To reverse a pair HTF BLUES w/supporting signals (ex: 15M/30M/1H combo) ARE A MUST! If still unsure let price move enough until it makes sense and start again.

Safest Path (Best for MaxPlan)
Requires More Rules & Patience

*Best Used with Non-Ranging Pairs
